

‘Hook’ for Fall Burn Down

CL # 31

In the fall growers start to spray Roundup and 24D for burn down. Mainly because there are going to be weeds that Roundup alone will not get.

If you want to get a better kill, spray pattern, and drift control all in one product, consider Hook.

When you use Hook, please do not add any other additive and be sure to ‘Add Hook Last’.

We advise using 10 gal of water per acre with 1 qt of Hook per 100 gal. of spray. If you have bigger or hard to kill weeds go to 3 pints of Hook per 100 gal.

Since we still have cool nights and showers this time of year you need a rain fastener. If you are using Hook---- it is built in. Hook is wash off resistant, guaranteed.

To avoid any problems after using all year, we suggest washing out the spray tank with Atlantic-Pacific’s **Work-Horse Tank Cleaner**. It will cut old build up and also lube the pump for the winter.

Everyone needs an edge for better control on weeds in the wheat and burn down and Hook is it.
